Jamshaid Mehmood

Frontend Engineer | React · Next.js · Redux | Node.js · Django REST

Lahore, Pakistan · +92 304 5297828 · jamshaidmehmood1234@gmail.com · Portfolio · GitHub · LinkedIn

SUMMARY

Frontend engineer with 2 years building and scaling the UI layer of HireStream, a React/Next.js hiring SaaS used by enterprise recruiting teams. Currently leading an application-wide UI revamp. Shipped 3 role-based analytics dashboards, rebuilt 9 paginated report UIs, and led a platform-wide migration of 30+ modules from class components to functional/hooks, cutting technical debt by 40%. Built a reusable component library, a Redux state architecture with URL-synced deep-link filters, and a full i18next internationalization pass (EN/DE) across the product.

Also works down the stack: extends the Django REST Framework endpoints behind those screens — serializers, viewsets, filter backends and pagination — and ships full-stack side projects end to end. SalesFlow CRM, deployed and publicly running, is mine from the PostgreSQL schema and Express API through JWT/TOTP authentication and role-based access control to the React client on top.

EXPERIENCE

Frontend Developer Jul 2024 – Present (2 yrs)

Arbisoft, Lahore, Pakistan | HireStream — multi-tenant HR & hiring SaaS (React 17/Next.js, Redux, Django REST)

Application-Wide UI Revamp (Ongoing)

- Currently leading a revamp of the platform's entire user interface — modernising the visual language, layout and interaction patterns across every module, from Figma redesigns through to production.
- Rolling the new patterns out through the shared component library so the redesign lands consistently across dashboards, reports and workflow screens rather than page by page.

Component Architecture & Reusability

- Engineered a shared React component library (MetricsCard, DateRangePicker, OffsetPagination, EllipsisWithTooltip, NoteModal, RecruiterCard, FilterBar) adopted across 9 report UIs and 3 dashboards, eliminating layout duplication and cutting per-feature build time.

Dashboards & Reports (Figma → Production)

- Translated Figma wireframes into 3 fully responsive role-based dashboards (Recruiter, Team Lead, Leadership) featuring HiringFunnel charts, GenderDistribution, OfferAcceptanceTrend, RecruiterPerformanceTable, and UpcomingInterviewsCard — all with URL-synced filters, skeleton loaders, and per-table pagination.
- Rebuilt 9 report UIs (Hiring, Current Openings, Candidate Master, Offer Data, Source Performance, Time-Based Metrics, Scheduling, Referral, Custom List) with debounced search, server-side sort/filter, a status/source chip system, and CSV export — all URL-backed for deep linking.
- Built an async export progress UI — a WebSocket-driven progress snackbar with a linear progress bar and disabled states — giving users real-time feedback during large report exports.

Backend — Django REST Framework

- Extended the DRF endpoints behind the report and dashboard surfaces — serializers, viewsets, filter backends, and pagination — so the API returned the exact shape the UI needed instead of the client reshaping payloads.
- Moved sorting and filtering server-side across the reporting endpoints, keeping large result sets off the client and making pagination authoritative.
- Wrote SQL queries and Python scripts against the product database to verify dashboard figures and answer ad-hoc reporting requests from stakeholders.

State Management & URL Sync

- Implemented Redux action/reducer/selector patterns with URL-backed filter state (search, page, page size, date range), enabling deep-link restore, per-table page-size memory, and zero-loss browser navigation across all paginated views.

Class-to-Functional Migration

- Led a platform-wide migration of 30+ modules (admin, templates, job listing, job detail, sourcing, requisitions, candidate profile, interviews, onboarding, online assessments, bulk-action modals) from class components to functional components/hooks, cutting technical debt by 40% and standardizing async patterns across the frontend.

Responsive & Cross-Browser UI

- Built responsive grid layouts and mobile/desktop dual-position Job Actions menus; enforced cross-browser compatibility across Chrome, Firefox, and Safari; applied a consistent chip/badge/profile-link styling system and a tooltip-on-truncation pattern throughout the product.
- Built the Careers & Job Discovery UI, including faceted search, bookmarks, recency labels, and similarity scores on job cards, plus step-by-step virtual tour onboarding for Settings, Jobs, Candidates, and Requisitions.

Internationalization (i18n)

- Rolled out i18next across the full frontend (EN/DE) — all new components, dynamic workflow/stage labels, and locale-aware dropdowns via a getTranslatedLabel utility — enabling the platform to serve non-English enterprise clients.

Performance & UX Polish

- Introduced skeleton loaders, debounced search inputs, and lazy-loaded chart wrappers (CustomBar, CustomDoughnut, CustomHorizontalBar via HOCs), cutting perceived load time on data-heavy report pages.
- Diagnosed and fixed a Formik re-init bug that preserved stale form state, search-highlight corruption from overlapping ranges, a filter-reset-on-refresh bug, and a double-API-call bug on rebase — reducing reported UI/UX issues by 30%.

Code Quality & Delivery

- Participated in PR reviews, enforced ESLint standards with filename context in webpack output, and shipped 20 distinct features across Agile/Scrum sprints — consistently delivering end-to-end UI from design handoff to production.

PROJECTS

SalesFlow CRM — Full-Stack Sales CRM 2026

React 19 · Express 5 · PostgreSQL · Prisma | Live Demo · Source

- Sole engineer: designed the PostgreSQL schema with Prisma, built the Express 5 REST API, and shipped the React client on top — deployed and publicly running.
- Authentication written from scratch: JWT sessions, bcrypt hashing, Google OAuth token verification, and TOTP two-factor with QR enrolment and recovery codes.
- Role-based access control enforced in middleware (admins see the organisation, reps only their own records), plus an audit log covering create/update/delete/merge across every entity.
- Analytics dashboard of KPI cards, revenue charts, deal-stage distribution and sales forecast (Recharts); drag-and-drop Kanban pipeline via DnD Kit; contacts at scale with filters, CSV import/export and duplicate merge.
- React Query for server state and caching, i18next EN/DE, persisted dark/light theme, responsive from phone to desktop.

TECHNICAL SKILLS

Core Frontend: React, Next.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, SASS/SCSS, Tailwind CSS, jQuery

State & Routing: Redux, React Hooks, React Query, Context API, URL-synced state, deep-link filter patterns

UI & Styling: Bootstrap, CSS Grid, Flexbox, responsive layouts, cross-browser compatibility

Data Visualization: Chart.js, Recharts, hand-written SVG charting, dashboard & KPI design

Backend: Python, Django REST Framework, Node.js, Express 5, REST API design, JWT, OAuth (Google), TOTP 2FA, bcrypt, role-based access control

Databases: PostgreSQL, Prisma, MongoDB, Mongoose, SQL (reporting & analytical queries)

Tooling: Webpack, Vite, ESLint, Git, Figma, i18next, Formik, Yup, DnD Kit, Docker (development)

Practices: Agile/Scrum, SDLC, code reviews, WCAG basics, performance optimization

EDUCATION

BS Information Technology Jun 2020 – Jun 2024

Punjab University College of Information Technology (PUCIT), Lahore · CGPA 3.7/4.0

Intermediate (ICS) Mar 2018 – Mar 2020

Punjab College of Information Technology (PGC), Lahore · 90%, A+

CERTIFICATIONS

Responsive Web Design — freeCodeCamp, 2024
